V1.1.2	2021-12-03	<ul style="list-style-type: none"> <li>Updated the certification description.</li> <li>Updated the description of features.</li> </ul>
V1.1.1	2021-08-18	<ul style="list-style-type: none"> <li>Updated the description of features.</li> <li>Updated the side-view dimensions diagram.</li> <li>Added the certification related description.</li> </ul>
V1.1.0	2021-04-30	Updated the appearance diagram.
V1.0.0	2021-03-31	First release

## Introduction

The A8s-N is a high-end small receiving card developed by NovaStar. A single A8s-N supports resolutions up to 512×384@60Hz. Adopting the exclusive Image Booster technology of NovaStar, the A8s-N can precisely calibrate the color gamut and grayscale of the screen, and improve the grayscale by 64 times. It also supports the pixel level brightness and chroma calibration, individual gamma adjustment for RGB, low latency, 3D and HDR functions, significantly improving the brightness, grayscale and color performance from every aspect and offering users an ultimate visual experience with a uniform, smooth and lifelike image.

The A8s-N uses high-density connectors for communication to limit the effects of dust and vibration, resulting in high stability. It supports up to 32 groups of parallel RGB data or 64 groups of serial data (expandable to 128 groups of serial data). Its reserved pins allow for custom functions of users. Thanks to its EMC Class B compliant hardware design, the A8s-N has improved electromagnetic compatibility and is suitable for various on-site setups that have high requirements.

## Certifications

RoHS, EMC Class B

**If the product does not have the relevant certifications required by the countries or regions where it is to be sold, please contact NovaStar to confirm or address the problem. Otherwise, the customer shall be responsible for the legal risks caused or NovaStar has the right to claim compensation.**

## Features

### Improvements to Display Effect

- **Image Booster**  
The Image Booster has the following 3 functions that improve the display effect (the actual effect depends on the driver IC) from different dimensions.
  - **Color Management:** Allow users to freely switch the color gamut of the screen between different gamuts in real time to enable more precise colors on the screen.
  - **Precise Grayscale:** Individually correct the 65,536 levels of grayscale (16bit) of the driver IC to fix the display problems at low grayscale conditions, such as brightness spikes, brightness dips, color cast and mottling. This function can also better assist other display technologies, such as 22bit+ and individual gamma adjustment for RGB, allowing for a smoother and uniform image.
  - **22bit+:** Improve the LED display grayscale by 64 times to avoid grayscale loss due to low brightness and allow for more details in dark areas and a smoother image.

NovaLCT V5.4.0 or later is required.

- **Pixel level brightness and chroma calibration**  
Work with NovaStar's high-precision calibration system to calibrate the brightness and chroma of each pixel, effectively removing brightness differences and chroma differences, and enabling high brightness consistency and chroma consistency.
- **Quick adjustment of dark or bright lines**  
The dark or bright lines caused by splicing of cabinets or modules can be adjusted to improve the visual experience. This function is easy to use and the adjustment takes effect immediately.
- **Low latency**  
The latency of video source on the receiving card end can be reduced to 1 frame (only when using modules with driver IC with built-in RAM).
- **3D function**  
Working with the sending card that supports 3D function, the receiving card supports 3D image output.
- **Individual gamma adjustment for RGB**  
Working with NovaLCT (V5.2.0 or later) and the sending card that supports this function, the receiving card supports individual adjustment of red gamma, green gamma and blue gamma, which can effectively control image non-uniformity at low grayscale conditions and white

balance offset, allowing for a more realistic image.

- **Image rotation in 90° increments**  
The display image can be set to rotate in multiples of 90° (0°/ 90°/180°/270°).
- **Image rotation at any angle**  
Working with SmartLCT and the MCTRL R5 LED display controller, the receiving card supports image rotation at any angle.
- **HDR**  
HDR10 and HLG are supported.  
  
Work with the sending card that supports the HDR function to correctly parse the HDR video source and faithfully reproduce the original brightness range and color space, allowing for a more lifelike image.

### Improvements to Maintainability

- **Smart module (dedicated firmware required)**  
Working with the smart module, the receiving card supports module ID management, storage of calibration coefficients and module parameters, monitoring of module temperature, voltage and flat cable communication status, LED error detection, and recording of the module run time.
- **Automatic module calibration**  
After a new module with flash memory is installed to replace the old one, the calibration coefficients stored in the flash memory can be automatically uploaded to the receiving card when it is powered on.
- **Quick uploading of calibration coefficients**  
The calibration coefficients can be quickly uploaded to the receiving card, improving efficiency greatly.
- **Module Flash management**  
For modules with flash memory, the information stored in the memory can be managed. The calibration coefficients and module ID can be stored and read back.
- **One click to apply calibration coefficients in module Flash**  
For modules with flash memory, when the Ethernet cable is disconnected, users can hold down the self-test button on the cabinet to upload the calibration coefficients in the flash memory of the module to the receiving card.
- **Mapping function**  
The cabinets display the receiving card number and Ethernet port information, allowing users to

easily obtain the locations and connection topology of receiving cards.

- **Setting of a pre-stored image in receiving card**  
The image displayed during startup, or displayed when the Ethernet cable is disconnected or there is no video signal can be customized.
- **Temperature and voltage monitoring**  
The temperature and voltage of the receiving card can be monitored without using peripherals.
- **Cabinet LCD**  
The LCD module connected to the cabinet can display the temperature, voltage, single run time and total run time of the receiving card.
- **Bit error detection**  
The Ethernet port communication quality of the receiving card can be monitored and the number of erroneous packets can be recorded to help troubleshoot network communication problems.  
NovaLCT V5.2.0 or later is required.
- **Status detection of dual power supplies**  
When two power supplies are used, their working status can be detected by the receiving card.
- **Firmware program readback**  
The firmware program of the receiving card can be read back and saved to the local computer.  
NovaLCT V5.2.0 or later is required.
- **Configuration parameter readback**  
The configuration parameters of the receiving card can be read back and saved to the local computer.
- **LVDS transmission (dedicated firmware required)**  
Low-voltage differential signaling (LVDS) transmission is used to reduce the number of data cables from the hub board to module, increase the transmission distance, and improve the signal transmission quality and electromagnetic compatibility (EMC).

## Improvements to Reliability

- **Dual card backup and status monitoring**  
In an application with requirements for high reliability, two receiving cards can be mounted onto a single hub board for backup. When the primary receiving card fails, the backup card can serve immediately to ensure uninterrupted operation of the display.  
The working status of the primary and backup receiving cards can be monitored in NovaLCT V5.2.0 or later.
- **Loop backup**  
The receiving cards and the sending card form a loop via the primary and backup line connections. When a fault occurs at a location of the lines, the screen can still display the image normally.
- **Dual backup of configuration parameters**  
The receiving card configuration parameters are stored in the application area and factory area of the receiving card at the same time. Users usually use the configuration parameters in the application area. If necessary, users can restore the configuration parameters in the factory area to the application area.
- **Dual program backup**  
Two copies of firmware program are stored in the application area of the receiving card at the factory to avoid the problem that the receiving card may get stuck abnormally during program update.
- **Dual backup of calibration coefficients**  
The calibration coefficients are stored in the application area and factory area of the receiving card at the same time. Users usually use the calibration coefficients in the application area. If necessary, users can restore the calibration coefficients in the factory area to the application area.

## Appearance

All product pictures shown in this document are for illustration purpose only. Actual product may vary.

## Indicators

Indicator	Color	Status	Description
Running indicator	Green	Flashing once every 1s	The receiving card is functioning normally. Ethernet cable connection is normal, and video source input is available.
		Flashing once every 3s	Ethernet cable connection is abnormal.
		Flashing 3 times every 0.5s	Ethernet cable connection is normal, but no video source input is available.
		Flashing once every 0.2s	The receiving card failed to load the program in the application area and is now using the backup program.
		Flashing 8 times every 0.5s	A redundancy switchover occurred on the Ethernet port and the loop backup has taken effect.
Power indicator	Red	Always on	The power input is normal.

## Dimensions

The board thickness is not greater than 2.0 mm, and the total thickness (board thickness + thickness of components on the top and bottom sides) is not greater than 8.5 mm. Ground connection (GND) is enabled for mounting holes.

Tolerance:  $\pm 0.3$  Unit: mm

### Note

The distance between outer surfaces of the A8s-N and hub boards after their high-density connectors fit together is 5.0 mm. A 5-mm copper pillar is recommended.

To make molds or trepan mounting holes, please contact NovaStar for a higher-precision structural drawing.

## Pins

### 32 Groups of Parallel RGB Data

	GND	119	120	GND	

#### Note

The recommended power input is 5.0 V.

OE\_RED, OE\_GREEN and OE\_BLUE are display enable signals. When RGB are not controlled separately, use OE\_RED. When the PWM chip is used, they are used as GCLK signals.

In the mode of 128 groups of serial data, Data65–Data128 are multiplexed into Data1–Data64.

### Reference Design for Extended Functions

Pins for Extended Functions			
Pin	Recommended Smart Module Pin	Recommended Module Flash Pin	Description
RFU3	HUB_CODE0	HUB_CODE0	Flash control pin 1
RFU4	HUB_SPI_CLK	HUB_SPI_CLK	Clock signal of serial pin
RFU5	HUB_CODE1	HUB_CODE1	Flash control pin 2
RFU6	HUB_SPI_CS	HUB_SPI_CS	CS signal of serial pin
RFU7	HUB_CODE2	HUB_CODE2	Flash control pin 3
RFU8	/	HUB_SPI_MOSI	Module Flash data storage input
	HUB_UART_TX	/	Smart module TX signal
RFU9	HUB_CODE3	HUB_CODE3	Flash control pin 4
RFU10	/	HUB_SPI_MISO	Module Flash data storage output
	HUB_UART_RX	/	Smart module RX signal
RFU11	HUB_H164_CSD	HUB_H164_CSD	74HC164 data signal
RFU12	/	/	/
RFU13	HUB_H164_CLK	HUB_H164_CLK	74HC164 clock signal
RFU14	POWER_STA1	POWER_STA1	Dual power supply detection signal 1
RFU15	MS_DATA	MS_DATA	Dual card backup connection signal
RFU16	POWER_STA2	POWER_STA2	Dual power supply detection signal 2
RFU17	MS_ID	MS_ID	Dual card backup identifier signal
RFU18	HUB_CODE4	HUB_CODE4	Flash control pin 5

#### Note

The RFU8 and RFU10 are signal multiplex extension pins. Only one pin from either the Recommended Smart Module Pin or the Recommended Module Flash Pin can be selected at the same time.

## Specifications

Maximum Resolution	512×384@60Hz	
Electrical Parameters	Input voltage	DC 3.3 V to 5.5 V
	Rated current	0.6 A
	Rated power consumption	3.0 W

Operating Environment	Temperature	–20°C to +70°C
	Humidity	10% RH to 90% RH, non-condensing
Storage Environment	Temperature	–25°C to +125°C
	Humidity	0% RH to 95% RH, non-condensing
Physical Specifications	Dimensions	70.0 mm × 45.0 mm × 8.0 mm
	Net weight	18.5 g
Packing Information	Packing specifications	Each receiving card is packaged in a blister pack. Each packing box contains 80 receiving cards.
	Packing box dimensions	378.0 mm × 190.0 mm × 120.0 mm

The amount of current and power consumption may vary depending on various factors such as product settings, usage, and environment.
