# **Change History**

Version	Release Date	Description
V1.5.0	2024-07-17	Remove the OPT input function.
		Remove the OPT loop function.
		Remove the mode selection for OPT devices.
		• Add the description for the display of MAC address as well as the configuration and display of the gateway on the LCD screen.
		Updated the certifications.
V1.4.0	2024-01-08	Added the description for OPT 1 and OPT 2 input.
		• Updated the working mode of OPT 3 and OPT 4.
		Added the description for OPT mosaic.
		• Added the description for the input source hot backup function.
		• Added the description for the Ethernet port backup test.
		• Added the description for Ethernet port backup status displayed on home screen in fiber converter mode.
		• Added the description for DVI MOSAIC and OPT MOSAIC backup.
		Added the description for OPT Loop.
		Added the description for OPT device mode.
		Optimized the Mapping function.
V1.3.0	2022-12-02	Updated the product rear panel picture.
		Added the OSD function descriptions.
V1.2.0	2021-06-01	Changed some components on the rear panel.
V1.1.0	2019-10-09	New features:
		Added the third layer (PIP2).
		<ul> <li>Added the description for optical fiber port and Ethernet port statuses displayed on home screen.</li> </ul>
		Added the description for 3D function.
		Changes:
		HDMI supported HDCP 2.2.
		Deletes:
		Deleted the descriptions for Transition Effect and Effect Duration in Display Control.
V1.0.0	2019-06-06	First release

# 1 Overview

The NovaPro UHD Jr is NovaStar's new all-in-one controller that features excellent video processing capabilities, sending card functions and LED screen configurations. The NovaPro UHD Jr provides a variety of video input connectors, supporting ultra HD 4K×2K@60Hz image processing and sending capabilities. Additionally, the NovaPro UHD Jr supports 8K×1K@60Hz ultra-high resolution settings.

With the help of smart control software V-Can from Novastar, the NovaPro UHD Jr can enable richer image mosaic effects and faster and easier operations.

The NovaPro UHD Jr can send the processed video to the LED screen via Neutrik Ethernet ports and optical fiber ports. Thanks to its powerful video processing capabilities and sending functions, the NovaPro UHD Jr is well suited for stage control systems, conference sites, activities, exhibition sites and other highend rental applications as well as fine-pitch LED displays.

- Backup > OPT 3/OPT 4: OPT 3 and OPT 4 work in **Backup** mode. Display the connection and backup statuses of the Ethernet ports on the fiber converter connected to the NovaPro UHD Jr.

# 5 Menu Operations

#### **Button descriptions:**

#### Knob

On the home screen, pressing the knob enters the operation menu screen.

On the operation menu screen, rotate the knob to select a menu item, and press the knob to confirm the selection or enter the submenu.

When a menu item with parameters is selected, you can rotate the knob to adjust the parameters. Please note that after adjustment, you need to press the knob again to confirm the adjustment.

ESC: Press the button to exit the current menu or cancel the operation.

## 5.1 Screen Brightness

You can adjust the screen brightness in an eye-friendly way according to the current ambient brightness. Besides, appropriate adjustment of screen brightness can extend the service life of the LED screen.

Figure 5-1 Screen brightness

Menu	
Screen Brightness	60%
Screen Settings	>
Layer Settings	>
Input Settings	>
Image Mosaic	>
Preset Settings	>
Display Control	>
Advanced Functions	>
General Settings	>
Factory Reset	>
Communication Settings	>
Working Mode	>
Language	>

- Step 1 Press the knob to enter the device menu.
- Step 2 Select Screen Brightness and press the knob to confirm the selection.
- Step 3Rotate the knob to adjust the brightness value, and the LED screen will display the effect in real-time.Then press the knob to apply the set brightness when you are satisfied with it.

## 5.2 Screen Settings

You can configure the screen to make it display the whole image correctly.

The options are Quick Configuration and Advance Configuration.

## 5.2.1 Quick Configuration

#### **Preconditions**

- LED screen must be a regular screen.
- Cabinets of the screen must be regular cabinets with the same resolution.
- The following data flow settings are supported. During data flow settings, you must ensure that the physical connection of each port is along the same direction and downward to next one.

• During data flow settings, you must ensure that the Ethernet Port 1 is at the beginning position of the whole physical connection.

#### Procedure

- Step 1 Power on the LED screen.
- Step 2 Rotate the knob to choose Screen Settings > Quick Configuration, and press it to enter its submenu.

Figure 5-2 Quick configuration

een Settings		Quick Configuration
Quick Configuration	>	Cabinet Row Qty
Advanced Configuration	>	Cabinet Column Qty
Save to RV Card		Port 1 Cabinet Qty
More Settings	>	Data Flow (Front View)

- Step 3 Set **Cabinet Row Qty** and **Cabinet Column Qty** according to the actual row and column quantities of the cabinets.
- Step 4 Rotate the knob to Port 1 Cabinet Qty to set the quantity of the cabinets loaded by Ethernet port 1.
- Step 5 Rotate the knob to **Data Flow (Front View)** and press it, then select an appropriate physical connection mode of the cabinets.

During data flow settings, you can view the real-time effects of different data flow settings on LED display by rotating the knob. When you are satisfied with the LED display image, press the knob to save the settings; when you are not satisfied, press **ESC** button to exit the current operation and the settings will not be saved.

## 5.2.2 Advanced Configuration

You can set the cabinet row and column quantities, horizontal offset, vertical offset and data flow of the cabinets loaded by a single Ethernet port.

## Procedure

- Step 1 Press the knob to enter the device menu.
- Step 2 Rotate the knob to choose Screen Settings > Advanced Configuration, and press it to enter its submenu.
- Step 3 Turn on the advanced configuration function, and then set the cabinet row and column quantities, horizontal offset, vertical offset and data flow for the target Ethernet port.

Figure 5-3 Advanced configuration

Screen Settings		Screen Settings		Advanced Configuration
Quick Configuration	>	Quick Configuration	>	Status
Advanced Configuration	>	Prompt		Ethernet Port
Save to RV Card		5		Cabinet Row Qty
More Settings	>	Special training is necessary before this function can be correctly performed. Continue?		Cabinet Column Qty
		No		Horizontal Offset
				Vertical Offset
				Data Flow (Front View)
				Apply

#### 5.2.3 Save to RV Card

You can send and save the screen configuration to the receiving card. The configuration data will not be lost after the device is powered off.

#### 5.2.4 More Settings

- Step 1 Press the knob to enter the device menu.
- Step 2 Rotate the knob to choose Screen Settings > More Settings, and press it to enter its submenu.

### Mapping

You can turn on this function to display the sequence numbers of Ethernet ports and cabinets.

Example: "S:01" stands for the sending card number, "P:05" stands for the Ethernet port number and "#001" stands for the cabinet number.

#### Note:

The receiving card employed by the system must support the Mapping function.

## Load RCFGx Files

After the LED screen is powered on, if a certain cabinet or the entire LED screen is not lit, you can load the receiving card configuration files (namely RCFGx files) that have been configured on NovaLCT software to the NovaPro UHD Jr.

Step 1 (Optional) After you have configured the screen on NovaLCT, click **Save to File** under the **Receiving Card** tab to save the configuration file to PC.

## **LED Screen Color**

You can adjust the screen color and the LED screen will display the effect in real-time.

Table 5-1	Screen colo	or parameters
-----------	-------------	---------------

Parameter	Description
Color temperature	You can set the color to <b>Standard</b> , <b>Cool</b> , <b>Warm</b> and <b>Custom</b> . Custom allows you to adjust individual R, G or B value.
Gamma	The range is $1.0-4.0$ and the stepping is $0.1$ .

### Figure 5-8 Color temperature effect

Standard

Warm

## 5.3 Layer Settings

Step 1 Press the knob to enter the device menu.

Step 2 Rotate the knob to select Layer Settings and press the knob to enter the layer settings screen where you can set the followings.

- Main layer
- PIP1 and PIP 2
- BKG
- OSD

## 5.3.1 Main Layer and PIP

Menu	Description
Status	The status of the selected layer: <b>On</b> and <b>Off</b> Note: Press the <b>PIP</b> button in <b>FUNCTION</b> area on the device front panel to enter the layer settings screen.
Input Source	The input source of the layer Note: Press the input source button in <b>SOURCE</b> area on the device front panel to select the input source for the main layer.
Backup Source	The backup source of the layer Note: The primary input source of the current layer cannot be set as the backup one.
Primary Source Preferred	<ul> <li>On: The primary source will always be used if there is a signal. When the primary source fails, the layer input source is switched to the backup one automatically. Once the primary source resumes, the layer input source seamlessly switches back to it.</li> </ul>
	• Off: The layer input source will be switched to the primary source only when the backup one fails and the primary one has a signal.
Scaling Mode	The options are Full Screen, Pixel to Pixel and Custom.
H Width	The horizontal width of the layer
	The range is -32768~32768.
V Height	The vertical height of the layer
	The range is -32768~32768.
Initial X	The initial horizontal coordinate of the layer
Initial Y	The initial vertical coordinate of the layer
Input Crop	The function of cropping the input source image and displaying it in full screen
	Status: You can turn on or turn off this function for the selected layer.
	H Width: The horizontal width of the current input source. If no input source is detected, the default value is 1920.
	V Height: The vertical height of the current input source. If no input source is detected, the default value is 1080.
	Initial X: The horizontal initial coordinate of the cropped part upon the current input

	source. The range is 0-horizontal width of input source and the default value is 0. Initial Y: The vertical initial coordinate of the cropped part upon the current input source. The range is 0-vertical height of input source and the default value is 0.
Priority	The layer priority. The options are <b>1</b> , <b>2</b> and <b>3</b> . 1: Send the layer to the back.
	2: Place the layer in the middle.
	3: Bring to the layer to the front.
Reset	Reset all the layer parameters to default settings.

## Figure 5-9 Layer parameter descriptions

## Figure 5-10 Input crop

## 5.3.2 BKG

You can set the background for the displayed image. The BKG is located at the back.

Menu	Description
Status	The status of the BKG: <b>On</b> and <b>Off</b> (default)
Туре	The options area <b>Pure Color</b> and <b>Image</b> .

Pure Color BKG	You can adjust the individual R, G or B value to set a pure color BKG.
Capture	<ul> <li>Source: Select an input source.</li> <li>Save To: Set the save location of the captured image. The options include BKG 1 / BKG 2 / BKG 3 / BKG 4.</li> <li>Apply: Save the captured image to the selected save location. At most 4 BKG images are supported.</li> </ul>

#### Figure 5-11 Capturing input source image

## 5.3.3 OSD

The NovaPro UHD Jr supports at most 8 OSD images. Each time only one OSD can be used. OSD has the highest priority which cannot be changed.

Before you add OSD, please make sure you have imported the OSD images or edited the OSD text in V-Can.

- OSD image size: Max. 4096×2160 or 8192×1080
- OSD image format: PNG, JPG, JPEG, BMP
- Step 1 Press the knob to enter the main menu screen.
- Step 2 Rotate the knob to select Layer Settings > OSD to enter the OSD settings screen.
- Step 3 Perform the OSD-related settings as required.

Parameter	Description	
Status	Turn on or turn off the OSD. The default options is <b>Off</b> .	
OSD Select	The options include OSD1, OSD2, OSD3, OSD4, OSD5, OSD6, OSD7 and OSD8.	
Initial X	The initial horizontal coordinate of the OSD	
	The value ranges from 0 to 16384 and defaults to <b>0</b> .	
Initial Y	The initial vertical coordinate of the OSD	
	The value ranges from 0 to 16384 and defaults to <b>0</b> .	

#### Table 5-2 OSD parameters

Parameter	Description
H Width	The horizontal width of the OSD
V Height	The vertical height of the OSD

#### Notes:

You cannot adjust the OSD size via the device front panel screen. If you do need to resize the OSD, please adjust it when you import it in V-Can.

For the OSD text, you can set its text style and scrolling mode. These settings can only be carried out in V-Can.

## 5.4 Input Settings

#### 5.4.1 Input Source

The NovaPro UHD Jr supports DP, HDMI, SDI-1, SDI-2 and DVI input connectors.

Rotate the knob to select the desired input source and press the knob to enter the input source resolution menu.

Input Settings	
DP	>
HDMI	>
SDI-1	>
SDI-2	>
DVI	>
Mosaic Backup	Part

#### Figure 5-12 Selecting input source

## 5.4.2 Setting Input Source Resolution

You can adjust the resolution and frame rate of the input source through the following two ways.

- Standard resolution
- Custom resolution

### Figure 5-13 Setting input source resolution

#### Note:

SDI input source does not allow for resolution adjustments.

## **Standard Resolution**

You can select a standard resolution and frame rate. Then rotate the knob to select **Apply** and press the knob to make the settings take effect.

#### Figure 5-14 Standard resolution

Table 5-3 Standard connector resolutions

Standard resolutions	DP 1.2	HDMI 2.0	Dual- DVI	Single- DVI
1024×768@ (48/50/59.94/60/75/85) Hz	$\checkmark$	$\checkmark$	$\checkmark$	$\checkmark$

3840×2160@ (23.98/24/25/29.97/30) Hz	$\checkmark$	$\checkmark$	$\checkmark$	×
3840×2160@ (50/59.94/60) Hz	$\checkmark$	$\checkmark$	×	×

### **Custom Resolution**

Rotate the knob to set a custom width, height and frame rate. Then rotate the knob to select **Apply** and press the knob to make the settings take effect. If you do not press the knob, the settings will not take effect.

#### Figure 5-15 Custom resolution

## 5.4.3 DVI Mosaic

- Step 1 Rotate the knob to choose Input Settings > DVI.
- Step 2 Rotate the knob to set the DVI input mode to **Single Link** or **Dual Link**. The connector working mode is shown in below.

#### Figure 5-16 Single link mode

1/2/3/4       >         Mosaic       >         DUAL DVI-D 1       DVI-D 2       DUAL DVI-D 3       DVI-D         DVI 1/2/3/4 connectors work together with the resolutions up to 1920×1080@60         DVI 1/2/3/4 connectors work together with the resolutions up to 1920×1080@60         Input Mode       Dual Link         1/3       >         Mosaic       >         DUAL DVI-D 1       DVI-D 2         DUAL DVI-D 3       DVI-D

	OVI Input Mode	Dual Link >			DVLD 2		DVLD
	nput Mode	Dual Link >	<b>→</b>	DUAL DVI-D 1	DVI-D 2	DUAL DVI-D 3	DVI-D

Step 3 In single link mode, the resolutions of DVI 1, 2, 3 and 4 are adjusted together. In dual link mode, the resolutions of DVI 1 and 3 are adjusted together. For resolution adjustment, please refer to 5.4.2 Setting Input Source Resolution.

Step 4	Rotate the knob to select <b>DVI Mosaic</b> and press the knob to enter the DVI mosaic settings menu.
--------	---

Menu	Description			
Layout	Set the mosaic layout for 4 DVI connectors.			
	Single link mode supports 7 layouts: 🔲, 🛄, 🥅, 🛄, 🛄, 🧮, 🛄 , 🗰			
	Dual link mode supports 2 layouts: 🔲, 🛄.			
Width	Adjust the width of the individual mosaic area.			
	Single link: The default width is 1920 and the range is 64–3840.			
	Dual link: The default width is 3840 and the range is $64-3840$ .			
Height	Adjust the height of the individual mosaic area.			
	Single link: The default width is 1080 and the range is 64–3840.			
	Dual link: The default width is 1080 and the range is $64-3840$ .			
Apply	Make the settings take effect.			

## 5.4.4 Set Mosaic Backup Mode

Rotate the knob to set the Mosaic backup mode.

• Part: When one or multiple DVI sources in the DVI mosaic group are abnormal, these sources are not displayed and other DVI sources are displayed normally.

• Group: When one or multiple DVI sources in the DVI mosaic group are abnormal, the backup device will replace the primary device to output the image.

#### Notes:

Only one interlaced SDI input is supported in DVI mosaic mode of four connectors.

**Mosaic Backup** is set to **Part** by default. In device backup mode, please set **Mosaic Backup** to **Group** for both the primary and backup devices to ensure the output image can be displayed normally.

### 5.4.5 Set Color Range

The input source color range includes RGB Full and RGB Limited. This function automatically converts the color range of the input source from RGB Limited to RGB Full, allowing for more accurate video processing.

- Off: Do not convert RGB Limited to RGB Full.
- On: Convert RGB Limited to RGB Full. You are advised to turn on this function when the input source has a limited color range.

## 5.5 Image Mosaic

When the pixel count of the LED screen is larger than the loading capacity of a single NovaPro UHD Jr unit, the image mosaic function is required. The total loading capacity of all cascaded NovaPro UHD Jr units equals to the total pixel count of the LED screen.

	<u>.</u> .	•	
-HOUTO - 1	A Imada	mosaic	parameters
		mosaic	parameters

Image Mosaic	
Status	On
Total H Pixels	7680
Total V Pixels	4320
Load Area Width	3840
Load Area Height	2160
Load Area Initial X	0
Load Area Initial Y	0

Example: If the pixel count of the LED screen is 7680×4320 which exceeds the loading capacity of a single NovaPro UHD Jr unit, 4 NovaPro UHD Jr units are used together for image mosaic. The connections are shown in the below figure.

#### Table 5-4 Parameter settings

Device No.	Load Area Width	Load Area Height	Load Area Initial X	Load Area Initial Y
1	3840	2160	3840	0
2	3840	2160	0	0
3	3840	2160	0	2160
4	3840	2160	3840	2160

## 5.6 Preset Settings

The NovaPro UHD Jr supports 10 user presets. User can save, load and clear the configured presets.

- Step 1 Rotate the knob to select **Preset Settings** and press the knob to enter the submenu.
- Step 2 Rotate the knob to select the desired preset and press the knob to pop up a dialog box. In the box, four preset operations are provided: Save, Load, Clear or Copy To.

#### Figure 5-20 Preset operations

Preset Settings		Preset Settings
1-Preset 1	Blank	I-Preset 1 Blank
2-Preset 2	Blank	■ 2-Preset 2 Blank
■ 3-Preset 3	Blank	Preset Operation Options
4-Preset 4	Blank	🔶 🖪 😫 📵 🔎
■ 5-Preset 5	Blank	Save Load Clear CopyTo
■ 6-Preset 6	Blank	■ <del>o-riesero olan</del> k
7-Preset 7	Blank	■ 7-Preset 7 Blank
8-Preset 8	Blank	■ 8-Preset 8 Blank

- Save: Save the current layer layout and settings to the target preset.
- Load: Load the selected preset to current lay layout.
- Clear: Clear all the contents in the selected preset.
- Copy To: Copy the current preset to the target preset.

#### Note:

If the target preset has data, Copy To operation will overwrite the existing data in the preset.

You can also press the number button on the front panel to quickly load a preset. For example, press the button 1 to load 1-Preset 1 and press the button 2 to load 2-Preset 2, and so on.

## 5.7 Display Control

This function is used to control the display. You can set the display to go black, freeze the display, display a test pattern, or go to normal display.

- Step 1 Press the knob to enter the device menu.
- Step 2 Rotate the knob to select **Display Control** and press the knob to enter the display control screen where you can set the followings.
  - Normal: Display the content of current input source normally.
  - Freeze: Freeze the current frame of the output image.
  - Black Out: Make the screen go black.
  - Test Pattern: Test the display effect and working status of the LED screen. Test patterns include **Pure Color, Gradient, Grid, Brightness, Spacing** and **Speed**.
  - Image Color: Adjust the color of the output image and the LED screen will display the effect in realtime.

Table 5-5 Image color parameters

Menu	Description	
Brightness	The range is 0–100 and the stepping is 1.	

Contrast	The range is $0-100$ and the stepping is 1.	
Saturation	The range is 0–100 and the stepping is 1.	
Hue	The range is -180-180 and the stepping is 1.	

## 5.8 Advanced Functions

Advanced functions include HDR, low latency, OPT mode, 3D mode and self-test settings.

## 5.8.1 HDR

HDR is the abbreviation for High-Dynamic Range. HDR function can greatly enhance the display image quality, allowing for a more clear and vivid image when the device is used together with NovaStar A8s/A10s receiving cards.

### Figure 5-21 System architecture

ior Status	On	
Peak Screen Brightness	1000	Carl
Ambient Brightness	30	
Low Grayscale Mode	15	and the second
Reset		
Only HDR10 video source is supported.		HUK.

- Step 1 Choose Advanced Functions > HDR > Status to enable the HDR function.
- Step 2 Rotate the knob to adjust the value of each parameter to improve the image quality.

Menu	Description
Peak Screen Brightness	Adjust the screen brightness under normal operation. The range is 100–1000 and the default setting is <b>1000</b> .
Ambient Brightness	Display the ambient brightness. The range is $0-200$ and the default setting is ${f 30}$ .
Low Grayscale Mode	The range is 0–50 and the default setting is <b>15</b> .

Step 3 (Optional) Select Reset to reset all the parameters to default values.

#### Notes:

Only HDR10 input source is supported.

When HDR function is enabled, the output loading capacity will be reduced by 50%.

#### 5.8.2 Low Latency

Low latency reduces the input source signal latency from input to output image of the NovaPro UHD Jr. This function can realize 2 frame delay from sending card to receiving card when the device is used together with NovaStar Armor series receiving cards.

#### Note:

The loading width of a single Ethernet port should be no greater than 512 pixels when low latency function is used.

The supported Armor series receiving cards include A8, A8s, A9s and A10s.

#### 5.8.3 OPT Mode

The NovaPro UHD Jr supports two OPT modes: Hot Backup (default) and Copy.

- Hot Backup: Optical fiber ports 3/4 backup the data of optical fiber ports 1/2.
- Copy: Optical fiber ports 3/4 copy the data of optical fiber ports 1/2.

#### Hot Backup

Step 1 Perform the hardware connections for hot backup mode.

Figure 5-23 Connections for hot backup mode

Step 2 Choose Advanced Functions > OPT Mode > Hot Backup to set the OPT mode as hot backup.

## Сору

Step 1 Perform the hardware connections for copy mode.

HDMI Source Cptical Fiber Cable Fiber Converter Fiber Converter Video Controller Cptical Fiber Cable Cptical

Figure 5-24 Connections for copy mode

Step 2 Choose Advanced Functions > OPT Mode > Copy to set the OPT mode as copy.

## 5.8.4 3D Mode

The NovaPro UHD Jr can work with the EMT200 3D transmitter and 3D glasses to provide you with 3D visual experience. For details, please see A 3D Function User Manual.

#### Note:

Turning on 3D mode will halve the device output capacity.

- Step 1 Perform the hardware connections as shown in Figure 5-25.
- Step 2 Choose Advanced Functions > 3D Mode > Status to turn on the function.
- Step 3 Select the 3D format. The options are Side-by-Side, Top-and-Bottom and Frame Sequential.
- Step 4 Set the eye priority according to the 3D glasses mode. The options are Left and Right.
- Step 5 Select More Settings to set the following items.
  - Right Eye Start
  - Signal Delay Time (us)
  - Third-Party Transmitter

### 5.8.5 Self-Test

You can test the device by yourself when the device fails, then feedback the result to NovaStar.

## 5.9 General Settings

Figure	5-26	General	settings

General Settings	
Hot Backup S	et as Primary
Ethernet Port Backup Test	Enable All
Synchronization	>
Fn	>
Output Frame Rate	60Hz
Return to Home	60s
About Us	>

## 5.9.1 Hot Backup

The NovaPro UHD Jr supports two hot backup modes: **Set as Primary** and **Set as Backup**. Figure 5-23 shows the application for this function.

- Set as Primary: The target Ethernet port on the home screen is highlighted. For example, 1
- Set as Backup: The target Ethernet port on the home screen is highlighted and displayed with a small triangle icon at the bottom right. For example,

When the primary device fails, the backup device will take over the work in real time.

## 5.9.2 Ethernet Port Backup Test

The NovaPro UHD Jr supports the Ethernet port backup test. You can test whether the pre-stored images, backup Ethernet ports and devices take effect without plugging and unplugging the Ethernet cables.

Menu	Description
Disable Primary	Disable the output of the primary Ethernet port on the current device to test whether the backup port or device takes effect.
Disable Backup	Disable the output of the backup Ethernet port on the current device to test whether the output of the primary port is normal.
Disable All	Disable the output of all the Ethernet ports on the current device to test whether the pre-stored image or backup device takes effect.
Enable All	Enable the output of all the Ethernet ports on the current device to complete the test.

## 5.9.3 Synchronization

You can select a synchronization signal to synchronize the cascaded devices.

Step 1 Rotate the knob to select Synchronization and press the knob to enter the submenu.

Step 2 Rotate the knob to set the synchronization status and source respectively.

- Status: Turn on or turn off this function. It is off by default.
- Source: Select the target input source.

#### Note:

When the input source resolution is changed or the input source cable is replugged, you need to re-set the function. Please turn off the function and turn it on again.

## 5.9.4 Fn

The **Fn** button on the device front panel can be customized to a **Synchronization**, **Preset Settings**, **Freeze**, **Black Out**, **Test Pattern**, **Quick Configuration**, **Image Color** or **Main Layer** shortcut button.

#### 5.9.5 Output Frame Rate

You can set the output frame rate of the image output by Ethernet port. The range is 23.98 Hz–120 Hz and the default setting is 60 Hz.

#### 5.9.6 Return to Home

You can set the period of time during which the system stays at the current page before returning to the homepage automatically when there is no operation performed. The default setting is 60s and the maximum value is 3600s.

### 5.9.7 About Us

You can view the following information.

- Device hardware version
- Company website (www.novastar.tech)
- Email address (support@novastar.tech)

## 5.10 Factory Reset

Factory reset function allows you to reset all the parameter settings of the device to factory defaults after the device update or when you think the parameters are improperly set.

On the main menu screen, rotate the knob to select **Factory Reset** and press the knob to enter the factory reset screen.

#### Figure 5-27 Factory reset

- Keep User Data: Reset the parameter settings to factory defaults, except for the communication, Fn and language settings, imported files and device name.
- Reset All: Reset all the parameter settings to factory defaults.

## 5.11 Communication Settings

#### 5.11.1 Communication Mode

The device is connected to the PC via both USB port and Ethernet port. The communication modes include **USB Preferred** and **LAN Preferred**.

#### Figure 5-28 Communication mode

Communication Settings	
Communication Mode	USB Preferred
Network Settings	>

- When USB Preferred is selected, the device communicates with the PC via USB port by preference.
- When LAN Preferred is selected, the device communicates with the PC via Ethernet port by preference.

#### 5.11.2 Network Settings

The network setting modes include Manual and Auto.

- Manual: Set the device IP address and subnet mask manually.
- Auto: The device reads the network parameters automatically.
- Reset: Reset the parameters to defaults.
- Display the device MAC address.

#### Figure 5-29 Network settings

Network Settings	
MAC Address	54:b5:6c:00:39:92
Mode	Manual
IP Address	192.168.0.10
Subnet Mask	255.255.255.0
Gateway	192.168.0.1
Reset	

#### Notes:

When communicating with the control PC, the device and control PC must be on the same LAN.

The IP address of current device cannot conflict with IP addresses of other devices.

## 5.12 Working Mode

The NovaPro UHD Jr can work as a Video Controller (default) or Fiber Converter.

- Step 1 Press the knob to enter the device menu.
- Step 2 Rotate the knob to select **Working Mode** and press the knob to enter the working mode screen to select a desired mode.
  - Video Controller: Both Ethernet ports and optical fiber ports are used for output.
  - Fiber Converter: Optical fiber ports are used for input, and Ethernet ports are used for output.

#### Figure 5-30 Video controller mode

#### Figure 5-31 Fiber converter mode

# 5.13 Langugage

The NovaPro UHD Jr supports both **Chinese** and **English**. You can freely switch to either language.

## A.1 For Single NovaPro UHD Jr Unit

- Step 1 Select a 3D video source and connect the source to DVI, HDMI or DP connector of theNovaPro UHD Jr unit.
- Step 2 Connect the NovaPro UHD Jr unit to the EMT200 3D emitter and the LED screen in series via Ethernet cables. Then power on the EMT200 and turn on the shutter 3D glasses that come with the EMT200.
- Step 3 Configure the screen. It should be noted that turning on the 3D mode will halve the output loading capacity of each Ethernet port and the whole unit.
- Step 4 Select the 3D video source format. Select Side-by-Side, Top-and-Bottom or Frame Sequential according to the actual video source format.
- Step 5 Adjust the eye priority. Since the left and right eye image switching manner of the video source may not be in sync with your shutter 3D glasses, you need to adjust the eye priority according to actual visual effect after the 3D mode is turned on. The default option is Left.
- Step 6 Adjust the right eye start position.
  - 1. For a side-by-side 3D video source

If the video source resolution is 1920×1080@60Hz, the right eye start should be set to 960. If the video source resolution is 3840×1080@60Hz, the right eye start should be set to 1920. In conclusion, it is recommended you set the right eye start position to the half of the video source width.

2. For a top-and-bottom 3D video source

If the video source resolution is 1920×1080@60Hz, the right eye start should be set to 540. If the video source resolution is 3840×1080@60Hz, the right eye start should be set to 540. In conclusion, it is recommended you set the right eye start position to the half of the video source height.

- 3. For a frame-sequential 3D video source, you do not need to adjust this parameter.
- Step 7 Adjust the signal delay time. Since the left-right eye switching time of the 3D glasses may not be in sync with that of the screen, you need to adjust the signal delay time according to actual visual effect after the 3D mode is turned on.
- Step 8 Turn on the 3D mode. Then only main layer will be kept and other layers will be closed.
- Step 9 Wear your 3D glasses to enjoy 3D effect. No matter how the main layer size or position is adjusted, it always supports 3D effect.

## A.2 For Multiple NovaPro UHD Jr Units

- Step 1 Select the 3D video source uniformly for all units and connect the source to DVI, HDMI or DP connectors of all units.
- Step 2 Connect all NovaPro UHD Jr units to the LED screen in series via Ethernet cables, and connect the EMT200 to one of devices via an Ethernet cable. Then power on the EMT200 and turn on the shutter 3D glasses that come with the EMT200.
- Step 3 Configure the load area parameters of each unit. It should be noted that turning on the 3D mode will halve the output loading capacity of each Ethernet port and the whole unit.
- Step 4 Set the image mosaic parameters of each unit, which will not be illustrated in this document.
- Step 5 Select the same 3D video source format for all units. Select Side-by-Side, Top-and-Bottom or Frame Sequential according to the actual video source format.
- Step 6 Adjust the eye priority uniformly for all units. Since the left and right eye image switching manner of the video source may not be in sync with your shutter 3D glasses, you need to adjust the eye priority according to actual visual effect after the 3D mode is turned on. The default option is Left.
- Step 7 Adjust the right eye start position for all the units to the same value.
  - 1. For a side-by-side 3D video source

If the video source resolution is 1920×1080@60Hz, the right eye start should be set to 960. If the video source resolution is 3840×1080@60Hz, the right eye start should be set to 1920. In conclusion, it is recommended you set the right eye start position to the half of the video source width.

2. For a top-and-bottom 3D video source

If the video source resolution is 1920×1080@60Hz, the right eye start should be set to 540. If the video source resolution is 3840×1080@60Hz, the right eye start should be set to 540. In conclusion, it is recommended you set the right eye start position to the half of the video source height.

- 3. For a frame-sequential 3D video source, you do not need to adjust this parameter.
- Step 8 Adjust the signal delay time. Since the left-right eye switching time of the 3D glasses may not be in sync with that of the screen, you need to adjust the signal delay time according to actual visual effect after the 3D mode is turned on. All units should be set to the same delay time.
- Step 9 Turn on the synchronization function and select the current 3D video source as the sync source.
- Step 10 Turn on the 3D mode and wear your 3D glasses to enjoy 3D effect.

# A.3 Notes

- 1. Turning on the 3D mode will halve the output loading capacity of each Ethernet port and the whole unit.
- 2. It is recommended you use the 3D glasses within 3 meter distance from the EMT200.
- 3. The frame rate of the selected 3D video source should be higher than 60Hz.
